NEW INCENTIVE! FROM OKANOGAN COUNTY PUD

STANDARD ELECTRIC WATER HEATER

- Heats Water
- Built To Last
- High Quality
- Uses Up To 50% Less Energy

HEAT PUMP WATER HEATER

- Heats Water
- Built To Last
- High Quality
- Uses Up To 50% Less Energy

JUST BECAUSE THEY LOOK THE SAME DOESN'T MEAN THEY WORK THE SAME.

That's because *heat pump* water heaters work much more efficiently than their standard electric counterparts. And that means you can save up to 50% on your monthly electric water heating costs for years to come.

Heat Pump Water Heaters reduce water-heating costs by

up to 50 percent.

The Most Efficient Way to Heat Water

A heat pump water heater offers you the flexibility to meet all your hot water needs. Okanogan County PUD also offers incentives to help offset the cost.

Advanced Technology That's Easy to Install

A heat pump water heater draws heat from the surrounding air and transfers it to the tank, making the technology more efficient than standard tanks. A heat pump water heater works with your existing plumbing and electrical systems, making installation fast and easy when performed by a trained technician.

Contact Energy Services BEFORE you start your project.

The water heater MUST be listed on BPA's HPWH Qualified Products List and installed according to manufacturer's specifications. The incentive is \$300 or \$600, depending on the product purchased.
